Wireless Directional Display

Our new wireless option allows you to mount your Directional Display™ without the need for a signal cable.

The Wireless is also available on our Aro-lite Curve™ trailers. Trying to reach a trailer in tight locations or working around difficult weather can be a challenge. The Wireless lets you change modes, adjust brightness, check battery voltage, and turn the unit on or off from the safety of your vehicle.

The wireless feature can be used in applications such as:

- Detachable crash cushions
- Large striping trucks
- Difficult areas to route cables
- Toll booths
- Weigh stations
- Truck terminals

The wireless built in diagnostics monitors every function of your control. LED's on the wireless modules display transmission activity and connection status making it easy to troubleshoot any problems. The unique linking feature prevents other Aro-link™ controls from accidentally interfering from each other.
