

## Data Activation Logging Program

A great upgrade for your pedestrian activated units is the Activation Data Logging.

This upgrade allows customers to receive data for how many pedestrians are activating the push button and using the crosswalk system.

Activation Data Logging also allows customers to review collected data in graphs to be able to showcase to colleagues what is the activity at the crosswalk system.

### SPECIFICATIONS

- Activation Data Logging
- Compatible with Pedestrian Activated RRFB, Beacon, LED Flashing Sign
- Activation Data Logging will include:
  - Date Stamp
  - Time Stamp
  - What side of the crosswalk the push button was activated
  - Time Duration of RRFB
  - Battery Voltage Health
  - Faults in the System
